In the midst of COVID lockdown, KoPT launched / published a web portal for online issuance / renewal of RFID based permit for Kolkata Dock System. KDS of KoPT perhaps is the first port in India who introduced total "paperless" permit system based on RFID tag and card. Port users will now be able to issue / renew permit from their home /office. Queue / waiting time at Permit office will be drastically reduced. This system will provide visibility of number of vehicles and man inside the port at any point of time and thereby enhance transparency & security of the port access control system.
